Open course 2021-22

Programme Outcomes (POs) are the accomplishments of graduates of a programme immediately after their graduation. POs are formulated broadly based on knowledge, skill, and attitude. Knowledge and skills are imparted through the curriculum. In principle, the curriculum, pedagogy, and assessment should support the attainment of this set of outcomes in order to make the programme a truly outcome-based one.

Curriculum mapping is a tool for checking the extent to which the outcomes are achieved. A curriculum mapping can be conceptualised as an analysis of the provision of opportunities for learning in a curriculum in relation to the curriculum's intended learning outcomes. By constructing a curriculum map, you will have an overview of how far and where in your programme each intended outcome is being

addressed. We can then determine whether the learning opportunities provided are sufficient and in appropriate sequence so that adjustments can be made accordingly.

Therefore to mitigate the gaps and to prepare students on industry requirement domains Open Courses are offered to students. These are additional (over and above the curriculum) courses that the faculty/department offered to bridge the gap found in the curriculum. These courses add value to the existing courses which enable the students to acquire all the graduate attributes (POs) to become successful professionals. Open course conduction for this semester as per the Calendar of events was decided between 13.6.2022 to 17.06.2022 and conducted.

The Courses mentioned in the table were offered by the departments

- Registration Fee (decided by the Department): 28.5.2022
- Brochure printing and publicity by the department: 30.5.2022

A total of 1051 students attended the open courses and successfully completed the course. The experts both internal and external had put in great efforts in delivering topics that are leading technologies. This will not only enhance the student's employability but also creates a talent pool at the department and the college level.

Interestingly, for some courses, there is a high demand from the students to increase the course period and teach them the advanced topics in those courses. Having understood their eagerness and interest in learning the topics, an honest attempt was made to collect feedback from students so as to improvise on conduction, preparedness, offering the right courses, engaging the right resource persons, etc... in the times to come. This feedback will certainly shape the planning process for conducting open courses next time.

Artificial intelligence would be the ultimate version of Google. The ultimate search engine that would understand everything on the web. It would understand exactly what you wanted, and it would give you the right thing. We're nowhere near doing that now. However, we can get incrementally closer to that, and that is basically what we work on.
